Amazon, Berkshire Hathaway and JPMorgan Team Up to Try to Disrupt Health Care

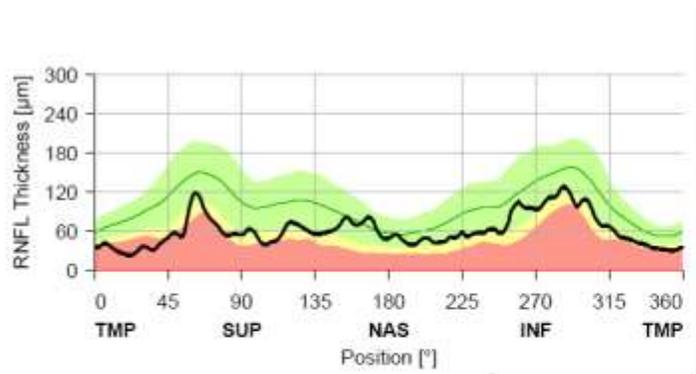

By NICK WINGFIELD, KATE THOMAS and REED ABERNETHY JAN. 24, 2018

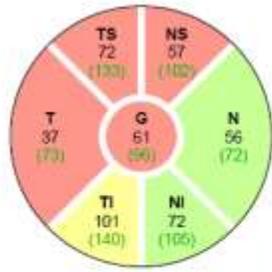

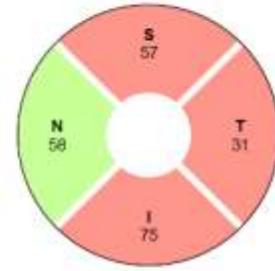

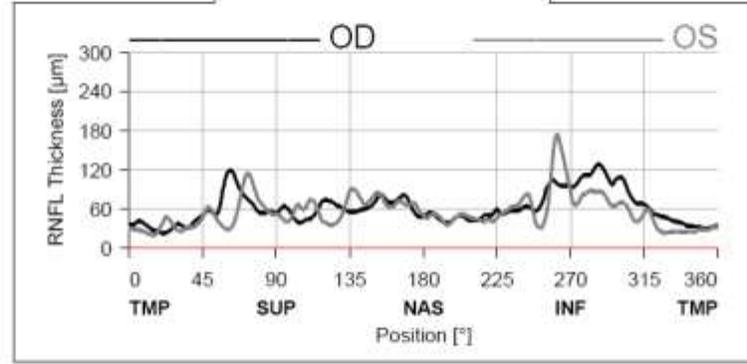

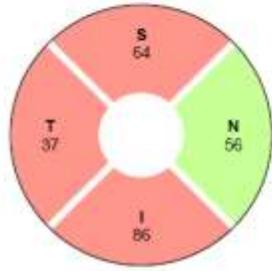

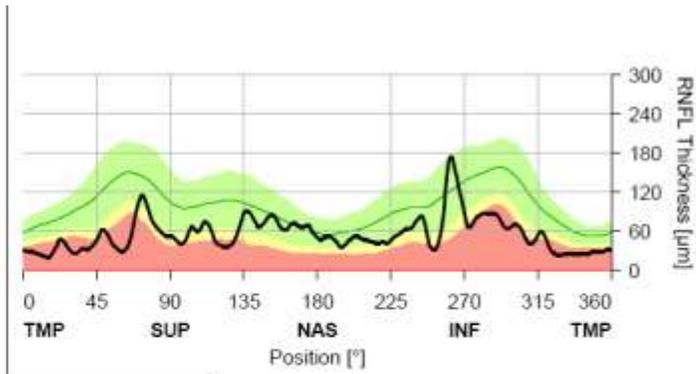

Employees at an Amazon warehouse in Phoenix, Ariz. The company will join forces with Berkshire Hathaway and JPMorgan Chase to try to disrupt health care, since ranked as the No. 100 U.S. firm.

SEATTLE — Three corporate behemoths — Amazon, Berkshire Hathaway and JPMorgan Chase — announced on Tuesday that they would form an independent health care company for their employees in the United States.

The alliance was a sign of just how frustrated American businesses are with the state of the nation's health care system and the rapidly spiraling cost of medical treatment. It also caused further turmoil in an industry reeling from attempts by new players to attack a notoriously inefficient, intractable web of doctors, hospitals, insurers and pharmaceutical companies.

An artificial intelligence platform for the multihospital collaborative management of congenital cataracts

Erping Long, Haotian Lin , Zhenzhen Liu, Xiaohang Wu, Liming Wang, Jiewei Jiang, Yingying An, Zhuoling Lin, Xiaoyan Li, Jingjing Chen, Jing Li, Qianzhong Cao, Dongni Wang, Xiyang Liu, Weirong Chen & Yizhi Liu 

Research Paper

Diagnostic Efficacy and Therapeutic Decision-making Capacity of an Artificial Intelligence Platform for Childhood Cataracts in Eye Clinics: A Multicentre Randomized Controlled Trial

2019

Findings: Between August 9, 2017 and May 25, 2018, 350 participants (700 eyes) were randomly assigned for diagnosis by CC-Cruiser (350 eyes) or senior consultants (350 eyes). The accuracies of cataract diagnosis and treatment determination were 87.4% and 70.8%, respectively, for CC-Cruiser, which were significantly lower than 99.1% and 96.7%, respectively, for senior consultants ($p < 0.001$, OR = 0.06 [95% CI 0.02 to 0.19]; and $p < 0.001$, OR = 0.08 [95% CI 0.03 to 0.25], respectively). The mean time for receiving a diagnosis from CC-Cruiser was 2.79 min, which was significantly less than 8.53 min for senior consultants ($p < 0.001$, mean difference 5.74 [95% CI 5.43 to 6.05]). The patients were satisfied with the overall medical service quality provided by CC-Cruiser, typically with its time-saving feature in cataract diagnosis.

Interpretation: CC-Cruiser exhibited less accurate performance comparing to senior consultants in diagnosing childhood cataracts and making treatment decisions. However, the medical service provided by CC-Cruiser

$$\min_G \max_D V(D, G)$$

$$V(D, G) = \mathbb{E}_{x \sim p_{data}(x)} [\log D(x)] + \mathbb{E}_{z \sim p_z(z)} [\log(1 - D(G(z)))]$$
